

**What We Will Learn:**

Students will learn many new things in sixth grade computers! We will learn things like how to type correctly, digital citizenship, cloud computing, email, graphics, web page design, and more. My goal is to teach students to use the computer as a tool, no different than any other tool we all use each day. The students will learn in a hands-on environment in which they will participate as active learners.

What You Can Expect:

Students will be given every opportunity to succeed and you will see continuous growth that you can monitor weekly using powerschool. In the event that a student is absent, unlike traditional textbook classes like math or social studies, I cannot send a book home for student/parent review. Instead, I will do my best to provide content and resources on my lesson plan page for you to work with your child at home so that the material is learned. For that reason, it is very important that you check my lesson plan page on days missed and communicate as needed, this will help everyone succeed.

Assessment:

Students will be assessed with both occasional quizzes online and hands-on projects created on the computer.

Additional Info:

I've been teaching for 26 years now and I'm happy to be a "local guy." I coach football and I am visible at many student events so I have a chance to see students outside of the classroom environment. I am grateful to be working at BTS and look forward to helping students succeed. Let's have a great year! Please visit me soon! www.jeffharry.weebly.com.
